

LRES6230PF-SFP

—PCIe x1 Single-port Gigabit SFP Ethernet Network Adapter (Intel I210)

Overview

LREC6230PF-SFP is a SFP optical fiber Gigabit Ethernet PCI Express x1 desktop adapter card independently developed by Shenzhen Lianrui Electronics Co., Ltd. based on the Intel I210 solution; Optimized and improved, system I/O is no longer the bottleneck of network applications. This adapter card can achieve fault tolerance by bundling and converging into a group, automatically detect and route the communication from the faulty port to other members in the same group to continue running to achieve uninterrupted communication. This adapter card has integrated hardware acceleration to perform TCP/UDP/IP checksum offload and TCP segmentation tasks. The host processing technology can offload the accelerator, and the host processing technology can offload the accelerator, releasing the occupation of CPU resources to free up more CPU resources to process other applications.

The LREC6230PF-SFP adapter card is used in the Gigabit Ethernet connection of the fiber optic network. The dedicated input and output (I/O) bandwidth equipped with PCI Express can ensure the superior performance of this network card without occupying the bus bandwidth.

LREC6230PF-SFP is a single-port SFP fiber optic adapter card with onboard SFP slots. Users can choose fiber optic modules according to actual transmission distance requirements. At the same time, the adapter card uses INTEL I210 server controller, which has high performance, high stability, and high Quality and very good compatibility, compatible with all brands of computers and fiber optic switches, this adapter card is the most ideal solution for deploying high-performance fiber-to-the-desktop (FTTD) applications.
